

As a supplier LST Group has a good reputation for reliability, ongoing support and maintenance. They certainly do live up to my expectations. The sales and technical people I deal with are great. They are very knowledgeable, reliable and helpful.

I rate LST Group 9 out of 10 and I would recommend the company as well as the two Universal Laser Systems we have purchased to anyone who has a need for CNC Technology.

Anthony Jones

Design Lab Manager, [University of New South Wales](#)

The Faculty of Built Environment at UNSW purchased two Universal Laser Systems about four years ago. These two machines are used by students of all design persuasions such as architecture, interior architecture, product designers, and landscape designers etc., to produce models of their projects. The models could be created out of wood, metal or plastic as this machine can deal with all these materials.

I've been exposed to CNC Technology for many years, and when the faculty decided to purchase laser, I had created a fairly good shopping list. When we were shopping around, we found that the Universal offered two standard features that are very important for planning and the safety of our working environment. Feature number one is a function that allows us to test run a file to predict how long it takes to run the job. Feature number two is the fire alarm system that is built into the machine. These two built in features don't only save us time and money they also help us to comply with OH&S requirements.

Price obviously is a consideration, but the cheapest equipment is not always the best investment. I knew the Universals from a previous employer and was very happy with their performance.

Another component, when buying any equipment, and in particular a high ticket item is, to consider the level of support provided by the supplier to ensure reliable functioning of the equipment. As a supplier LST Group has a good reputation for reliability, ongoing support and maintenance. They certainly do live up my expectations. The sales and technical people I deal with are great. They are very knowledgeable, reliable and helpful.

I rate LST Group 9 out of 10, and I would recommend the company as well as the two Universal Laser Systems we've purchased to anyone who's got a need for CNC Technology.
